

Category and Product-level Procurement and Delivery Planning Guide

Indicative Lead Times

3 July 2018

This document lays out indicative lead-times for planning purposes for key health products for the Global Fund's Pooled Procurement Mechanism. This information may also be useful as a reference for other procurement channels.

Procurement and delivery lead-time information is the time from making a procurement request to delivery in country and assumes that there are no financing or other challenges that may delay confirming an order. This information is provided at the category and the detailed product level and is indicative based on current market knowledge to assure on-time delivery and best value procurement in terms of product and freight costs.

Health Technologies – Viral Load, hematology, chemistry, CD4 equipment and reagents are dependent on procurement volumes, country importation requirements and manufacturer production schedules. Actual lead times will be confirmed at time of order placement. For planning purposes, please factor in minimum 6 months' timeline.

The lead-time information is updated from time to time. The most recent version of this guidance is available [here](#).

To find the required order month, select the date products required in country →

| Category level indicative procurement planning timeline guide <i>Note that there may be some variations within the category -please consult the attached detailed product level list for more specific guidance</i> | | 2018 | | | | | | 2019 | | | | | | | | | | |
