Additional Information

My commitment to mitigating the effects of the HIV/AIDS epidemic worldwide has taken me over the last 20 years from serving as a volunteer at local HIV/AIDS organizations to being a Country Director of Global HIV/AIDS programs. While my career trajectory has covered both domestic and international arenas – at progressively higher levels of leadership and responsibility – my main commitment has always been to the provision of quality services for people living with HIV and AIDS. Having 14 years working on the President's Emergency Plan for AIDS Relief (PEPFAR) program at United States Government (USG) agency headquarters, field and implementing partner offices, I have amassed first-hand experience analyzing health systems data in order to recommend strategic changes at policy, technical and programmatic levels to realize greater impact on the most vulnerable and at-risk populations worldwide. As an independent Global Health consultant, I now utilize my technical background in the field of HIV/AIDS on a variety of projects as both a technical expert and policy advisor.
